Project Management Certificate
AI Programming with Python
Generative AI
Hugging Face Agents Course

Honors-Awards

Phi Beta Kappa Honor Society
Cum Lambda Honors
Dean's Tuition Fellowship

Dylan Qian

Senior Software Engineer | Engineering Management
Irvine, California, United States

Summary

I am a full-time senior full-stack software engineer and part-time hip-hop choreographer.

While seemingly different, these two paths both allow me to apply my creativity and problem-solving skills. I love to turn ideas into actual applications as a software engineer, just like how I love to convert my emotions regarding a song into a routine as a choreographer.

I love to tackle big, messy problems whether in code or dancing. As a hip-hop choreographer and teacher, I'm used to dividing movements down to smaller and smaller pieces in order to help students understand the moves. At the same time, software engineering requires me to break down big ideas into smaller components that can then be implemented.

I'm currently working at Onelogin as a Software Engineer in the San Francisco. Don't hesitate to reach out! I am always excited to chat about tech, hip-hop, or just to say hello.

Experience

Finfare

Senior Frontend Engineer

July 2024 - March 2025 (9 months)

Irvine, California, United States

- Developed frontend prototype for Invest, a robo-investment mobile app, establishing the foundation for the product
- Led UI migration for Money, a business card mobile&web app, modernizing the interface and improving user experience
- Established frontend guidelines and standards, improving consistency and scalability across multiple codebases
- Re-architected the frontend structure to simplify development and enhanced maintainability and testability

- Spearheaded MVP development of Marketplace, an e-commerce platform, delivering full end-to-end experience in 2 weeks

Finch

Software Engineer

December 2021 - June 2023 (1 year 7 months)

San Francisco Bay Area

- Managed all developer experience-related products and projects, including our flagship frontend product, Connect, which enables seamless integration with HRIS providers. Also responsible for overseeing Developer Dashboard and React SDK, providing self-service tools for developers.
- Delivered key projects such as the Assisted Benefits Improvement Project, enhancing user experience in connecting with automated providers and accessing assisted benefits.
- Led end-to-end implementation of the Auth Config Project, offering configurability options in Connect across all automated providers for increased flexibility.
- Executed the Data Sync UI project, delivering a user-friendly dashboard for monitoring scheduled and requested data syncs.
- Spearheaded the implementation of Data Sync Phase 1, significantly reducing latency (>99% for many payroll providers such as Gusto), and enabling quick retrieval of pay statements within secs.
- Collaborated with cross-functional teams to build the first OIDC connection with BambooHR, enhancing authentication security while improving user experience.
- Contributed to the development of Auth Fallback, allowing seamless connection through Finch during provider downtime.
- Assisted in the prototype development of our ATS product, facilitating integration with popular ATS providers such as Lever and Greenhouse.
- Integrated successfully with Bob as a new automated provider, implementing API and credential authentication methods.
- Facilitated daily team standup and bi-weekly retrospectives, ensuring effective communication and collaboration within the team.
- Initiated backlog grooming and planning sessions with the previous VP, optimizing project management processes.

Award:

Recognized with the highest Founders' bonus for instrumental contributions to the successful Series B funding round

OneLogin

3 years 4 months

Engineering Manager

June 2021 - December 2021 (7 months)

San Francisco Bay Area

- Led a group of 8 engineers and 3 frontend and backend projects including CIAM implementation
- Cooperated closely with Product to identify new features and opportunities for our current and future product
- Groomed CRI and Security bugs tickets with Customer Success and Security team to maximize user experience and security
- Presented to CEO and Release Manager monthly to clearly deliver the team plan and goal to reach team KPI
- Mentored junior engineers and interns to bring them on board and help them maximize their potential quickly
- Presented Tech Talk about csrf protection and implementation, and content is selected into internal education program

Awards:

2021 Mid-year Hackathon Award - Best UI Award with Team Smart Hooks UI Portal

Description: Led and built an UI page for our Smart Hook APIs to allow admins with all levels of coding experience to read, create, update, delete, monitor their Smart Hooks in as little as 10 seconds! No more 15-page documents, no more learning postman, no more debugging configurations. It is all in few clicks now!

2021 June Platform Award

Description: Acknowledged for helping the Platform team to move multiple most critical user facing services to the new infrastructure without a single issue or any customer impact.

Senior Software Engineer

March 2021 - June 2021 (4 months)

San Francisco Bay Area

Software Engineer III

March 2019 - February 2021 (2 years)

San Francisco Bay Area

- Led multiple frontend and backend projects from scratch to rollout including rebuilding new profile and secure notes pages and implementing CSRF prevention
- Maintained and manage the deployments for 6 frontend and backend repos
- Cooperated closely with Product and Customer Success team to identify bugs and product improvements
- Achieved AWS Certified Developer and Cloud Practitioner Certificate; suggest implementing different AWS services and clarify the pros and cons for different approaches when designing new services
- Presented Tech Talk about the implementation of a new onboarding tutorial library to current service for better user experience
- Joined and won company-wide hackathon twice

Awards:

2020 Mid-year Hackathon Hack-to-prod - MFA Plugins

Description: Leverage TIDP to enable integration with 3rd party MFA solutions (voice recognition, face recognition, QE code scan).

2020 Hackathon Award - Biggest Impact on Business Performance with Team Speedlight

Description: Improve the Event creation pipeline by ~200x. Before a request from microservice to Monolith to create an event took around 100ms, we redesigned it so that microservices can create events in 0.5ms.

Software Engineer

September 2018 - February 2019 (6 months)

San Francisco Bay Area

Awards:

2019 Hackathon Award - Best in Show with Team Spectre

Description: Goal is to optimize spec performance inside Monolith Service and frontend microservice. Increase 200% runtime, brought coverage up to 85%, and 36% improvement on performance. Implemented test suite for front end projects and connected to the CI.

Hack Reactor

Software Engineer & Teaching Associate

May 2018 - September 2018 (5 months)

San Francisco Bay Area

- Technologies: JavaScript, ReactJS, AngularJS, Node.js, Express.js, HTML5, CSS3
- Selected and hired as Lead Teaching Associate from a pool of 80 students

- Partnered with Head of Curriculum in redesigning curriculum and contribute to the course code base to improve and solidify students' comprehension of material while enhancing their learning experience
- Mentored 30+ engineers on building full-stack web applications utilizing front-end frameworks such as ReactJS and AngularJS and server-side library Node.js and Express.js
- Trained 150+ engineers to effectively debug in their codes and building their problem-solving process
- Conducted technical interviews for program admissions

Self-employed

Software Engineer

January 2018 - September 2018 (9 months)

San Francisco Bay Area

DreamBnB

- Optimization for back-end architecture to handle heavy traffic and ensure scalability
- Technologies: ReactJS, Node.js, GraphQL, Server-side rendering, Artillery.io, New Relic
- Decreased response time by 47.6% by changing compounding indexing to single indexing
- Improved response time by 43.7% by implementing REST API instead of GraphQL
- Reduced single query time by benchmarking different types of databases (PostgreSQL: 10ms vs. MongoDB: ~0ms)
- Applied node clustering for horizontal scaling to handle 10 million data for realistic environment
- Implemented server-side rendering to improve user experience

Welp

- Reviews app for local businesses and restaurants
- Technologies: ReactJS, Node.js, Express.js, MongoDB, Redis, Docker, Jest, Enzyme, Flexbox
- Designed interactive and performant application with ReactJS
- Sped up response time by 10x by building caching layer via Redis in front of MongoDB database
- Created Photo Gallery component from scratch to increase components flexibility for additional customized features
- Resolved module conflicts and organized all modules into one proxy using Flexbox

DanceIn

- Social network and events app for dancers
- Technologies: React Router, Passport.js, Bootstrap
- Leveraged React Router to give users a seamless single-page app experience
- Incorporated Passport.js into application to provide simplified user authentication
- Polished user interface and implemented responsive functionality using Bootstrap

United AMG Partners

Business Consultant

October 2017 - December 2017 (3 months)

Newport Beach, California

- Analyzed company's situation and identified if its current health insurance fits company
- Custom-designed health insurance plan to get stronger cover with at least 20% less cost
- Provided 10+ in person employee seminars and 100+ customer service over phone

Stanley Black & Decker, Inc.

Student Consultant (Winter Internship)

January 2017 - February 2017 (2 months)

Baltimore, Maryland Area

- Developed plan for marketing DeWalt line of commercial grade battery-powered equipment
- Involved in engineering design, flyer and pamphlet creation, contacting landscapers, budget planning, and focus group
- Built stronger relationship between SBD and landscapers
- Insured that Engineering Management Department will be invited to work on future projects

Johns Hopkins Hospital

Student Consultant

September 2016 - November 2016 (3 months)

Baltimore, Maryland Area

- Created new processes to reduce \$1 million cost on replacing misplaced or lost instruments

- Analyzed process and practices within department, presenting tangible recommendations for enhancing efficiencies to hospital faculty

Meide Group USA Inc.

Chemical Engineering Consulting Intern

June 2015 - October 2015 (5 months)

Arcadia, Los Angeles

- Estimated equipment cost for multi-million-dollar Titania Slurry project that can increase effectiveness of TiO₂
- Assisted manager with presentation for headquarters
- Analyzed current market and located potential customers
- Provided technical support for more than 100 clients

J. Craig Venter Institute

Student Consultant

April 2015 - June 2015 (3 months)

Greater San Diego Area

- Managed 4-person team to re-design microbial fuel cell to achieve high efficiency in treating (approximately 80 gallons/day) for a household of 4
- Presented ideas to company officials and used ideas to modify current prototype
- Implemented final installation for households in Escondido, San Diego, and Tijuana, Mexico

Education

The Johns Hopkins University

Master's Degree, Engineering Management with Concentration in Operations Research · (2016 - December 2017)

UC San Diego

Bachelor's Degree, Chemical Engineering minoring in Business and Psychology · (2011 - 2016)

Nanjing Foreign Language School

High School, Academic · (2005 - 2011)

University of California, San Diego Extension
